

# Monitoring, Control and Metering

Global Investment Bank

Design, supply and installation of Open Integrated LONWorks solution at a Bank headquarters.

The building management system (BMS) reads all tenant meters and makes data available over the LONWorks network. The system can produce consumption reports and invoices and enables identification of areas of high load.

A central BMS head-end with remote web-based access allows 24-hour monitoring and pro-active maintenance support for all residents.

The network integration was relatively easy. The main challenge was the formatting of the presentation of consumption reports and invoices to be sent to tenants. The project was subject to rigorous and bespoke customer specifications.

**Client:** Wates Interiors  
**System:** Open LONWorks  
**Duration:** 14 Months  
**Value:** £1 Million
